

TURANTO RELEASE DOCUMENT

Turanto – Nov 29, 2019 Release 13.6.8

Nov 29, 2019 Release

Overview bug Fixes

- Hidden group BR were not working in imported model with database
- Email Feature - Removed entity dropdown from Middle column
- Email Feature - if entity name has space and enabled for email feature then the application launch was giving server error.
- BRs for Hidden Groups stops working and users need to recreate them again.
- Performance Issue: GetDocumentName() method slowed down index page loading. The issue was only in case for tenant login and not for Admin
- When the property name has a comma, the excel, CSV, or sync data import failed
- Screen of email was totally disturbed in BS4
- MaxFailedAccessAttemptsBeforeLockout did not worked
- Views in Admin area were not captured in the Journal
- Turanto - Editing derived property page was not filling all the data properly.
- Launch error due to show/hide column is fixed.
- Export - Date field was not getting exported as Date without the 12:00 time part
- 1:M Derived relation was not working properly
- Users were getting launch error after adding calculated property
- Users were getting error in uploading excel/csv when uploading blank (file with no record, only headers)

Release Details

Enhancements (Turanto)

- Introduced new custom code fragment for JS, View Page.
- More items are now getting journaled.
- Design improvement in Instruction (label)
- Included SNO in tenant security definition to compare with old.
- While creating the derived association, when users click 'Create' button before the derived value getting populated, system was giving server error. However, an association was getting created without derived information.
- When editing an existing 1:M association and checked Derived option and selected the Derived through information, derived the information doesn't get saved.

Features and improvements (Generated Application)

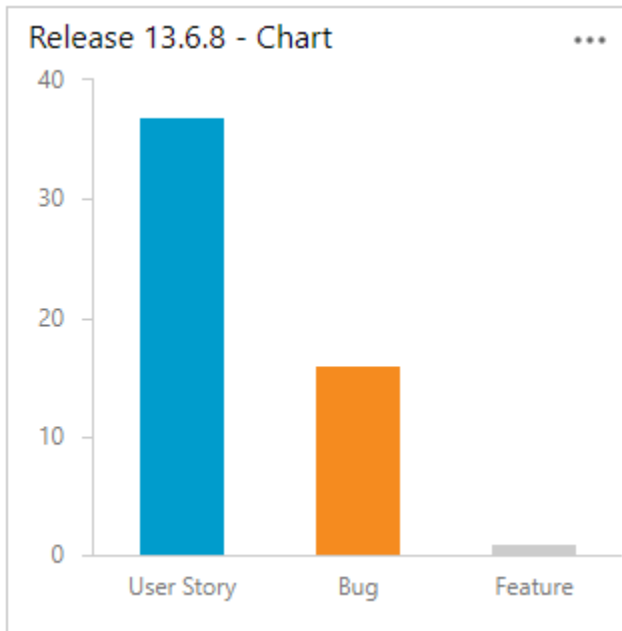

- Changes in Generated application according to OWASP Top 10 - Remove unused js files
- OWASP - Set HttpCookie to HttpOnly and Secure
- Removed the unused local variable - detected by SonarQube

Last Release Date: Nov 18, 2019 (13.6.7)

Technical Change Summary

Application Version	Turanto 13.6.8
Screen Updates	NA
DB Updates	NA
Data Update	NA
Stored Procedure Updates	N/A
Package Updates	N/A
Process Updates	N/A
Code location	SVN local
Documentation updates	N/A
VSTS query link	https://etelic.visualstudio.com/Turanto/_queries/query/5eb06f2c-9799-42bf-896d-16855229b4d5/?fullScreen=false

VSTS Board Summary Chart

ID	Work Item Type	Title
4920	Bug	Hidden group BR does not work in imported model with database
6945	Bug	Email Feature - Remove Entity dropdown from Middle column

6950	Bug	Email Feature - if entity name has space and enabled for email feature then it application doesn't launch
7416	Bug	BRs for Hidden Groups stop working and have to be recreated (after relaunch of model?)
8673	Bug	Performance Issue : GetDocumentName() method slows down index page loading only in case for tenant login and not for Admin
9066	Bug	When the property name has a comma, the excel, CSV, or sync data import fails
9536	Bug	Screen of email is totally disturbed in BS4
9610	Bug	MaxFailedAccessAttemptsBeforeLockout does not work
9624	Bug	Views in Admin area are not captured in the Journal
9724	Bug	Turanto - Edit derived property page doesn't fill all data properly.
9770	Bug	Launch error - show/hide column?
9803	Bug	Export - Date field should be exported as Date without the 12:00 time part
9807	Bug	1:M Derived relation does not work properly
9837	Bug	Launch error after adding calculated property
9838	Bug	Error with uploading excel/csv when uploading blank (file with no record, only headers)
579	Feature	Explore defining Tasks in Turanto
6918	User Story	Label correction when 'Grid/table' property is dragged & dropped
6951	User Story	Email Feature - remove all unnecessary entities and association from Email feature
